UNITED STATES DEPARTMENT OF AGRICULTURE BUREAU OF AGRICULTURAL ECONOMICS WASHINGTON, D. C.

February 25, 1949

#### MONTHLY EGG PRODUCTION, 1947-48

Egg production in the United States in 1948 was 4,597 million dozens, about the same as in 1947, the Bureau of Agricultural Economics announced today. A 3 percent reduction in the average number of layers on hand during the year was offset by a 3 percent increase in the rate of egg production per layer. Increases in egg production in 1948 in the North Atlantic, East North Central and Western States offset decreases in all other parts of the country.

Although the farm price of eggs in mid-January 1948 was 18 percent higher than a year earlier, the cost of the farm poultry ration was 47 percent higher, resulting in a very unfavorable egg-feed price relationship. This price relationship became progressively worse until June when prospects for a record feed crop became apparent and feed prices began to decline. From June until the end of the year the cost of the farm poultry ration dropped 21 percent from \$4.59 to \$3.62 Continued on page 14

per 100 pounds. During this period, however, egg prices remained at about the same level as those of 1947 and the egg-feed ratio became increasingly more favorable. These conditions encouraged farmers to reduce the culling of layers and feed heavier rations. The result was a record high rate of lay from April through December. Even though the number of layers during this period was 3 percent below those of 1947, egg production was up 1 percent because of the record high rate of lay.

Although farmers had raised 14 percent fewer chickens in 1948, by December there were only 3 percent fewer layers on farms. Farmers retained a larger-than-usual proportion of their pullets raised and also saved more hens. On January 1, 1949 there were 380, 493,000 layers on farms. These layers consisted of 62 percent pullets and 38 percent hens compared with 64 percent pullets and 36 percent hens a year earlier. Numbers of laying pullets were down 6 percent from January 1, 1948, while hens were up 3 percent.

In 1948 the rate of egg production per layer on hand during the year was 162 eggs, a new record high, compared with the previous high of 158 in 1947. Because of the heavy feeding and favorable weather, the rate of lay reached a record high level in each of the last nine months of the year. The rates were 1 to 11 percent above those in the corresponding months of 1947. They were especially high during the last 5 months. In November the rate was 9 percent above a year carlier and in December it was 11 percent above the rate in December 1947. Due to better management practices, better feeding and improved breeding stock the rate of lay has increased from 134 eggs per layer on hand in 1939 to 162 eggs in 1948.
